RHINO SPECIFICATIONS

Rhino is a proprietary fused polycarbonate graphic panel, printed at 1200 DPI with solvent UV stable ink then embedded with proprietary resin with pressure and heat between Custom milled UV stable Polycarbonate sheets.

Rhino Graphic Panels are made with at least 25% recycled material.

The face polycarbonate is a textured matte (P61 finish) sheet that can resist a 300lb dart impact without penetrating or cracking the material. Bullets pass through the material without shattering.

Rhino facing material is manufactured with UV stabilizers throughout the sheet and is back by a 10-year warranty against yellowing or clouding from the OEM (not just on the surface like most Polycarbonate sheets or other sign grade sheet materials).

The backing material for Rhino is a black utility grade ABS. By varying the thickness of the black ABS, Rhino can be fabricated from 1/4" to 1/2" thick (.093 to 1/8" has no black backer). Polishing or even painting the edges can enhance the elegant look of Rhino. Painting is recommended for interior applications only. No frame is required for Rhino graphic panels. Screw inserts can be used in Rhino that is 1/2" so that the sign can be attached without visible holes, clips or hardware.

Rhino panels will not warp even if a panel is only 1/8" or 1/4" thick. The flexible nature of Polycarbonate allows the sign to form into its fastening system without warping from heat and cold. Z-clips can be attached to the back of the panel without screws, allowing for the panels to be thinner than 1/2".

Rhino is in compliance with the applicable provisions of "RoHS (Restrictions on the use of Hazardous Substances).

Additionally the above- mentioned products do not contain any of the heavy metals listed below. We also certify that none of these chemicals are intentionally added to the formulation, Nor is it part of our manufacturing process.

Cadmium
Lead
Mercury
Chromium
PBB
PBDE
